Skype Instruments Partners with Xperential Scientific for Distribution in Australia.

Skype Instruments, based in the UK and are very proud to have been designing and manufacturing since 1983. Skype Instruments products are designed and built in the UK. They have a very wide product base and our sensors & systems are used for plant & crop research; micro-climate, global climate change studies; environmental monitoring and controlled environment installations.

Products include light sensors & systems, weather monitoring sensors, automatic weather stations, and plant research systems.

Xperential Scientific (www.xperentialscientific.com.au) is a new established scientific instrumentation, consumable, software and diagnostic supplier based in Melbourne, Australia. "Skype Instruments Ltd are pleased to have partnered with Xperential Scientific, and we're looking forward to our new business partnership" **Adam Taylor** said , from Skype Instruments, International Sales & Support Manager.

Harry Traikos, Director of Xperential Scientific commented that Skype Instruments will enhance its product offering to its customers, in addition it is delighted to represent Skype Instruments in Australia which has a worldwide reputation for producing high quality instruments. We are looking forward to supporting customers in Australia in the fields of Environmental Monitoring as well as in Controlled Environments.
